Hello Person,

My interest with the XXX Company began after meeting with Lead Software Engineer, Jane Doe. I share her passion for working on backend data structures, and I admire her dedication. I too want to play a role in the maintenance and development of Home Chef's administration platform , and I'd like to start doing so as a Software Engineer with the Home Chef.

As a Research & Development Chef within the company, I excelled in learning in a fast paced environment and thrived in a collaborative workplace. I have experience working in high-intensity workflows, delivering and performing quality work under tight deadlines. Now as a software engineer at 100Devs, I've worked on different full-stack applications, from design, coding, and testing to documentation and implementation. Most recently, I developed "Find A Court," an application that serves traveling tennis players a platform to search for free courts to play on around the country. It is a fully responsive modern design, built using HTML, CSS, Javascript, Express as a framework for Node.js, and EJS as a templating language and MongoDB as a database.

My enthusiasm, perseverance, and initiative make me a perfectly capable candidate for the Software Engineering I position in the Digital Business Transformation Team. I'm excited about the opportunity to work on behalf of the patients and physicians of Los Angeles. I look forward to hearing back from you soon.

Thank you,
James Cababa
